## EXPERIENCE

---

### Eulav-Grow

Remote, US

Software Engineer(Payments)

Mar 2025 – Aug 2025

- Designed and implemented a metered billing system using Stripe's usage-based API, tracking AI chat sessions via Grafana and translating consumption data into pay-as-you-go invoicing, directly increasing company revenue.
- Built and maintained developer-facing TypeScript SDKs and APIs for Shopify, BigCommerce, and WooCommerce integrations, contributing to a 15% increase in client sales.
- Introduced Redis-backed async queues to offload intensive tasks (media processing, email delivery), improving onboarding flow performance by 20%.
- Implemented structured API observability using Grafana, monitoring 1000+ RPS in production and enabling real-time incident detection across distributed services.
- Participated in code reviews and aligned backend delivery with product timelines across a small engineering team.

### First Software Systems

Lagos, Nigeria

Backend Engineer(Fintech)

Jan 2024 – July 2026

- Integrated Paystack payment gateway with HMAC-verified webhook handling, idempotency keys, and outbound webhook delivery to partner APIs, enabling reliable transaction processing for a food ordering platform at 10,000+ users.
- Designed multi-tenant PostgreSQL and MongoDB schemas supporting 10,000+ concurrent users across fintech and logistics platforms, with query optimization and indexing for high-throughput workloads.
- Built WebSocket-powered real-time chat systems handling 2000+ concurrent connections, improving application responsiveness by 25%.
- Built backend services for a crypto savings and bank transfer platform, integrating Paystack and VTPass APIs with secure transaction flows and multi-provider support.
- Translated client business requirements into technical architecture decisions, owning full backend design across 10+ client projects shipped on schedule.

### RadicalX

Remote, US

Software Engineering Intern

Dec 2023 – Mar 2024

- Built GPT-powered chatbot APIs for healthcare triage and an AI PDF summarizer SDK, shipping production Python backends during an intensive engineering bootcamp.
- Secured 2nd place in a global AI hackathon with a malaria triage project targeting African homes.

## PROJECTS

---

### Mono-Parser | [GitHub](#) | NestJS, FastAPI, BullMQ, Mono Open Banking API, Gemini AI

- Built a B2B credit decisioning API leveraging Mono Open Banking data to analyze cash flow, income stability, and debt exposure for automated loan underwriting across Nigerian fintechs.
- Architected a modular system with NestJS (orchestration) and FastAPI (scoring engine), aggregating 6+ data sources into 3 clean endpoints with an event-driven BullMQ pipeline for account linking, scoring, and decisioning.
- Built an outbound webhook delivery system with retry mechanisms, signature-based authentication, and at-least-once delivery guarantees; integrated Gemini AI for explainable loan decisions.

## CredWallet Service | [GitHub](#) | *Knex.js ORM, TypeScript, Express, MySQL*

- Built a production-grade fintech wallet REST API enabling users deposit, transfer and withdraw funds with atomic MySQL transactions, pessimistic row locking, and deadlock prevention via sorted lock acquisition.
- Designed a double-entry ledger system with immutable ledger entries, ensuring every debit has a corresponding credit and maintaining a full auditable trail of all money movement.
- Engineered idempotency key middleware scoped per user with 24-hour TTL caching to prevent duplicate financial transactions, and enforced strict API validation using Zod with IP-based rate limiting.

## TECHNICAL SKILLS

---

**Languages:** TypeScript, Go, Python, Java

**Frameworks:** NestJS, Express, FastAPI, Gin, SpringBoot, React.js

**Databases:** PostgreSQL, MongoDB, MySQL, Redis

**Tools & Infra:** Docker, AWS, Apache Kafka, GitHub Actions, Grafana, Prometheus, Jest, Cypress

**Core Skills:** Backend Engineering, Payment Systems, Event-Driven Architecture, REST APIs, Webhooks, SDK Development, Unit & E2E Testing

## EDUCATION

---

**Federal University of Technology Owerri**

*B.Eng Mechanical Engineering, GPA: 4.0*

Owerri, Nigeria

2019 – 2024

## AWARDS

---

**Winner** – Hack4Futo Hackathon (2023)

**Legacy Leadership Award** – Hack4Futo The Third Hackathon (2024)
